Proposed Solution Architecture & Overview

Author	Nandini Bade
Program	SkillWallet, ServiceNow Global Certification
Platform	ServiceNow (Service Catalog, Flow Designer, Business Rules)
Document	Phase 3: Project Design Phase - Proposed Solution Architecture & Overview

1. Executive Summary

The proposed solution leverages ServiceNow's Service Catalog, Flow Designer (Workflow Studio), and Business Rules to deliver an end-to-end automated car rental request management system.

2. Key Modules & Functional Architecture

1. Service Catalog Front-End: A structured catalog item titled 'Car Rental Request' placed in the 'Transportation Services' category with 7 dynamic variables (Car Type, Requested Date, Pickup/Drop Locations, Duration, Requestor, Reason).

2. Flow Designer Engine: A low-code flow 'Car Rental Req' running under System User context, triggering on Service Catalog submission, creating approvals, generating catalog tasks for the Transport Team, and sending completion emails.

3. Exception Incident Business Rule: A server-side script 'Create Incident If Car Unavailable' on the sc_req_item table (After Insert/Update) that automatically creates an Incident ticket whenever state equals 3.

4. Update Set Packaging: All configurations bundled into a named ServiceNow Update Set for seamless deployment.

> **PROPOSED SOLUTION BENEFIT**
> By combining Service Catalog, Flow Designer, and Business Rules, ServiceNow replaces manual email-driven requests with a structured, transparent, and fully auditable workflow.
