Final Project Master Report

Author	Nandini Bade
Program	SkillWallet, ServiceNow Global Certification
Platform	ServiceNow (Service Catalog, Flow Designer, Business Rules)
Document	Phase 6: Project Documentation - Final Project Master Report

Project Executive Summary

This Master Project Report details the end-to-end conceptualization, design, planning, implementation, testing, and deployment of the 'Car Rental Request Automation in ServiceNow' system by Nandini Bade.

1. INTRODUCTION

1.1 Project Overview: Corporate transport logistics often suffer from manual paper requests, untracked approval emails, and delayed vehicle dispatch. This project automates the entire process in ServiceNow.
1.2 Purpose: Provide a single digital portal for car rental booking, automated approvals, task assignment to the Transport Team, email notifications, and automatic incident escalation when vehicles are unavailable.

2. IDEATION PHASE

2.1 Problem Statement: Employees experience delays; transport managers struggle with manual allocation; governance lacks audit logs.
2.2 Empathy Map Canvas: Identifies user Pains (unclear availability, lost forms) and Gains (1-click request, automated RITM updates).
2.3 Brainstorming & Prioritization: Prioritized Service Catalog, Flow Designer, and Business Rule exception handling.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map: Details user experience across Entice, Enter, Engage, Exit, and Extend stages.
3.2 Solution Requirements: Defines 6 Functional Requirements (FR-1 to FR-6) and 6 Non-Functional Requirements (NFR-1 to NFR-6).
3.3 Data Flow Diagram: Maps Level 0 & Level 1 data flows between Requester, Catalog, Flow Designer, Approver, Transport Team, and Incident table.

3.4 Technology Stack: Built on ServiceNow Service Catalog, Flow Designer, Business Rules, MariaDB, and Update Sets.

4. PROJECT DESIGN

4.1 Problem Solution Fit: Matches legacy pain points directly to ServiceNow features.
4.2 Proposed Solution: Outlines the integrated catalog, flow, and business rule workflow.
4.3 Solution Architecture: Details 3-tier architecture (Presentation, Workflow, Database).

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning: Sprint 1 (Environment & Catalog Setup - 8 Story Points) and Sprint 2 (Flows, Business Rules & Testing - 17 Story Points). Total velocity: 12.5 points/sprint.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing: Benchmark measurements show sub-second form loads (0.85s) and workflow execution (0.35s).
6.2 User Acceptance Testing: Executed 11 test cases (T1-T11) with 100% pass rate.

7. RESULTS & SCREENSHOTS EVIDENCE

7.1 Order Confirmation Page: Displays Request REQ number.
7.2 RITM & Approval History: Shows Requested Item linked to Approval record.
7.3 Catalog Task: Displays sc_task assigned to Transport Team with Wait=enabled.
7.4 Email Log: Shows 'Your Car Request is approved.' email dispatch.
7.5 Incident Record: Displays Incident ticket created when State=3.

8. ADVANTAGES & DISADVANTAGES

Advantages: 100% digital audit trail, zero paper loss, rapid approval cycles, automated exception handling.
Disadvantages: Requires initial admin configuration and user training.

9. CONCLUSION

The Car Rental Request Automation system successfully replaces legacy manual processes with a streamlined, transparent, and auditable ServiceNow workflow.

10. FUTURE SCOPE & APPENDIX

Future Scope: Integration with IoT vehicle tracking, mobile app push notifications, and dynamic manager approval script.
Appendix: ServiceNow Update Set XML payload and project documentation repository.
